

Shopping Video

Hi everybody! It's Bill Confidence and what I am going to show you today is the all-new Oxford shopping cart with basket and swivel wheels. One of the most amazing products that Oxford has ever come up with. What we have here is a jumbo foldable shopping cart. We got a lot of heavy stuff over here so, it's simple, all you got to do is open the tape.

So, we got this thing over here, I'm assuming it's wheels and then we got the shopping cart itself. It feels heavy duty. All you got to do is just open it up. It's not bending, it doesn't look like its gonna give you any issues over there. We got this rare cart. It's steady it's pretty sturdy. Now all we got to do is take the wheels and attach them. So, what we're going to do is like this, this is a common-sense thing. I don't even need instructions. Just snap ah! That was easy! Another good part is that it has actually got shocks on the wheels so, if you are going over some bumps you know that thing is not just gonna slip right over on top of you.

Just snap this one in. You make sure that little piece which is a common-sense thing right there straight up on the bottom and just gotta like 1-2-3 and snap! Wow! That was awesome! Super easy! Look at those swivels!

Alright! So now what we're gonna do is we are gonna go ahead and install the back wheels. Let's check out what we got over here. You know what I like about this? My hands are greasy! That means it's going to last. We are giving you a quality product. If it's not greasy and it looks all clean that means it's gonna rust. You want to make sure that you buy a product that is going to last. Oxford is going to be the one that is gonna take care of it. Nobody else is gonna do it like Oxford does. So, we got some springs, little clips, washers and these are obviously got to be caps. I'm not a mechanic but I can tell you one thing. I'm gonna put this thing together and I'm going to show you how to put it to its maximum use. I'm gonna work this horse, are you ready for it? Watch! Alright.

What we're gonna do is we're gonna take this rod right here. As you can see, we got four holes. You just slip it right through this. And then you line up one hole in the middle and another hole in the middle. You take these clips. You slip them in the middle right there, simple. You take a washer, you put it right at the end. Then what you're gonna do is you are gonna take a spring because remember this is gonna take you literally anywhere you go. Then, the next step will be is you are gonna take another washer and you are gonna cover it up. And you can hold it down or whatever you got to do to make it stay in place. And you can just grab on to this area right here. Be careful for your fingers because these are heavy duty tires you don't want to hurt yourself. I recommend maybe putting it on a flat surface or something so you don't hurt yourself.

Then what you are going to do is you are gonna take another washer. Your last washer and your gonna put it into place. You are gonna take your cap and you are gonna line it up. As you can see you got some little holes right here. If your hands are greasy, you're doing a good job alright! You just line it up right there and it's a ...tricky thing you might.... and there you go! Snap! Right into place! And basically, you just repeat and do the same thing at the other side. I'm telling you, if this thing was a three-wheeler, I'd be happy enough. I don't even need the fourth wheel! Just to make sure that all our customers are happy I'm gonna put on the fourth wheel right now.

What we do is take the pin, put it into place down at the bottom, make sure it went through the other side just like the other one right there where you see it comin' out. You take your washer, spring, washer, wheel alright there we go! You hold it down and you kind of just snap it right into place and there we go! Super easy to fold it once you're done. So, all you got to do is fold it up, make sure your wheels line up. It's gonna have some type of locking mechanism unless I left the part out. There we go! Kind of remember taking it out of the box. You just hook it up to one side hook it up to the second side. And you're pretty much done! You

got it into place! It's super easy to store you just like put it into the cracks of your house. Make sure nobody finds out about it. As you see I got super easy glide right now. I'm just about to make a little spin, a little turn right here. We're gonna store it up with some real heavy goods.

What we got over here is an Oxford pasta maker. This thing is I have to say it's kind of heavy. I don't want to get ahead with that! So, we got about 17.8 kilos around 40 pounds. I'll check this out. That really hurt! As you can see here, I want to do a little 40- pound thing just to show you what a quality product is! Because you go anywhere else and you see online a flimsy little image, you'll never know the difference! That's why they hire Bill Confidence to make the video. Make sure when you purchase and spend your bill with conscious. Now, I'm gonna do another one just to show you what 80 pounds looks like. As you can see the tires at the side didn't snap off. I got 80 pounds in my shopping cart! Let's put another one on top! Alright! That makes me 120 pounds and I'm gonna double it just to show you what quality is about! You guys got to see it for yourself. This is no joke! Search online Oxford pasta maker check out and tell me if you find a lighter one than that one. Here we go I got mad way and I'm gonna start running to the register before I check out.

Buying a quality product Oxford shopping cart wagon is making sure you're gonna have a cart for lifetime!

Oxford shopping cart. Now this is mine. I'm out of here guys! Make sure I get my shopping cart!
